

## cloudcards aviation software partners with CAE Parc Aviation

Irish aviation software company, [cloudcards](#), has signed a major partnership deal with Canadian owned, Irish-based company CAE Parc Aviation.

The Limerick-headquartered company, founded by brothers Brian and Barry Fitzgerald, will supply [CAE Parc Aviation](#) with its aircraft transition and inspection tool [CARDS®](#).

CARDS® is a cloud-based software platform that has been successfully deployed in over 300 aircraft transition projects worldwide to manage the delivery and redelivery of leased aircraft as well as inspection and maintenance projects.

Designed and built on Salesforce, CARDS® helps simplify the management of complex aviation assets. It offers both remote and on-site auditing capabilities of aircraft documentation as well as physical aircraft inspection via its mobile application.

Following an extensive review of providers to improve efficiencies across aircraft transition, CAE Parc Aviation's technical services division selected [cloudcards](#) CARDS® system as its preferred partner.

Speaking of the partnership Bill Blake, CEO of Cloudcards said: "It is a massive endorsement for [cloudcards](#) to be chosen to partner with CAE Parc Aviation, a highly reputable aviation company and one that recognises the importance of innovative solutions in the ever-evolving aircraft leasing industry. This partnership will help expand our global footprint further and build on a very successful 12 months for the company."

With offices in Ireland, Singapore, the United States, Japan, Vietnam and China, CAE Parc Aviation's technical services division specialises in supporting the full aircraft lifecycle, from aircraft build & delivery to operation and transition.

"We are delighted to partner with cloudcards who have a solid reputation in the industry and a solution that meets our needs and those of our customers, while dramatically reducing the cost of aircraft asset management," said Don Salmon, Head of Aircraft Leasing Services in CAE Parc Aviation. "Not only is CARDS® easily adopted but it can be used worldwide in any jurisdiction and covers all aspects of an aircraft transition process."

cloudcards was established in 2013 and recently opened offices in Dublin. The past year has been its most successful yet as it capitalises on the booming aircraft leasing business. The company is currently closing its second funding round, details for which will be announced in the New Year.

**About CAE Parc Aviation:** as a global leader in the provision of full aircraft technical support services to the aviation industry, CAE Parc Aviation specialises in a range of aircraft transition and support solutions designed to assist leasing companies, airlines, MROs and OEMs.
